About

Fresh Master of Computing graduate from ANU with real world experience shipping software across fullstack, backend, and data systems. I take ownership of what I build and pick up new tools quickly, whether that's a new framework, a cloud platform, or a production bug at 2am. Looking for a team where I can contribute from day one and keep getting better.

Education

Australian National University, Canberra, ACT Jul 2024 – Jun 2026
Master of Computing (Specialization: Artificial Intelligence) GPA: 5.5/7
Relevant Coursework: Artificial Intelligence, Advanced Topics in AI, Software Construction, Relational Databases, Human-Computer Interaction, Document Analysis

M.S. Ramaiah Institute of Technology, Bengaluru, KA Nov 2020 – May 2024
Bachelor of Engineering in Computer Science GPA: 8.36/10
Relevant Coursework: Data Structures & Algorithms, Data Mining & Machine Learning, Cloud Computing & Big Data, Introduction to Deep Learning, Operating Systems

Skills

Languages: Java, Python, Kotlin, TypeScript, JavaScript, SQL / PostgreSQL, HTML / CSS
Frameworks & Libraries: Next.js, NestJS, React, Node.js, Flask, PyTorch, TensorFlow, JavaFX
Cloud & Hosting: AWS, Vercel, Heroku, Firebase, Google Cloud Platform (GCP), Supabase
DevOps & Tools: Git, Docker, CI/CD, Android Studio, Postman, GitHub Actions, Jira
AI & ML: Gemini API, Hugging Face, YOLO, CNNs, NLP, OCR

Experience

Bardar (Visit: bardar.online/) Jul 2025 – Jun 2026
Software Developer – ANU TechLauncher Industry Capstone

- Engineered the entire NestJS backend from scratch, owning 10+ REST APIs across artist discovery, geo-sync, genre filtering, and head-to-head comparison, integrated with source APIs and deployed on Heroku via CI/CD pipelines.
- Designed a log-scaled artist scoring algorithm to rank thousands of artists across any city globally.
- Architected a priority task queue and per-API rate limiter to orchestrate concurrent external API calls, reducing search latency by 20–30% and eliminating pipeline breakage under concurrent load.
- Led end-to-end integration of an agentic AI chatbot (Gemini 2.5 Flash) with access to all backend tool calls, enabling natural language artist discovery and dynamically rendering rich UI cards from API responses.

Axiscades Technologies Ltd Feb 2024 – Jul 2024
Data Science and Backend Intern

- Delivered Python/Flask backend APIs and a QR-based inventory system to automate industry inventory workflows, reducing processing time by 25%.
- Implemented YOLO-based defect detection pipelines for production line quality control, identifying assembly errors and container defects, cutting error rates by 60%.

Indian Space Research Organisation (ISRO) Feb 2023 – Feb 2024
Undergraduate Research Intern (Data Science) · M.S. Ramaiah Institute of Technology

- Designed and deployed ML models (CNNs, Autoencoders, Random Forest) across 50+ configurations to optimise satellite mission operations, achieving 30% increase in operational efficiency.
- Developed predictive maintenance workflows using Expert Systems and ML to detect satellite part failures with 85% accuracy, reducing maintenance downtime by 25%.

Projects

Nutricate | *Android, Java, Firebase, OCR, SQLite* | [GitHub](#) ↗ **Best Social Hackathon League Award, IISc**

- Built an Android app that uses OCR to scan food product labels and cross checks ingredients against a local allergen database, enabling users to instantly identify unsafe products.
- Implemented offline-first architecture with local SQLite storage, ensuring the app functions without internet connectivity for real-world accessibility.

PoliRec | *Java, Hugging Face LLM* | [GitHub](#) ↗

- Developed a unified government vehicle management app with separate user and admin portals, integrating a Hugging Face LLM chatbot to automate query resolution and reduce manual effort.

Publications

3 peer-reviewed publications across IEEE and IJACSA with 21 total citations. [Google Scholar](#) ↗
